RE: Site Inspection, EXP/027/009, Sadie and Mispah Claims

The above referenced 1987 drill site was inspected on July 12, 1988 by Holland Shepherd and Frank Filas. Holes have been drilled on relatively close centers. Some of the holes appear to have been backfilled with cuttings while others are open. Water was encountered in one of the open holes at approximately 80 feet (we dropped a rock and heard a splash). Cuttings piles can be found at each hole and there has been no attempt to regrade any of the dozer cuts made in pad preparation.

Jumbo Mining Corporation is in the process of acquiring these claims from West States Minerals. I explained to Mr. Dave Hartshorn the reclamation requirements for the site. He indicated that Jumbo Mining intended to mine this site in the near future.
